

Glass Calc Pro handles your shop's quotes, customers, and pricing. Here is exactly how that data is protected — in plain English, because that's how we'd want it explained to us.

Where your data lives

Glass Calc Pro runs on Railway, a US-based cloud platform that is independently audited and **SOC 2 Type II certified**. We don't run servers in a back office — your data sits in professionally managed data centers.

Payments never touch us

All payments are processed by Stripe, a PCI DSS Level 1 certified processor — the highest level of payment security certification. Card numbers go directly to Stripe and are **never stored on our servers**.

Your shop's data is isolated

Every account is separated at the database level. Your quotes, customers, and pricing are visible only to your shop — no other Glass Calc Pro customer can ever see them.

Encryption, both directions

Everything moving between your device and Glass Calc Pro is encrypted in transit (TLS — the same padlock your bank uses). Everything stored in our database is encrypted at rest.

AI that keeps your data yours

AI features are powered by Anthropic's commercial API. Under those terms, your data is **never used to train AI models**, and API inputs are deleted from Anthropic's systems within 30 days.

Built by a glass shop

Glass Calc Pro is built by the team behind Tualatin Valley Glass in Oregon. We run our own shop on this software every day — your data gets the same care ours does.

Our commitments to you

- **Your data belongs to you.** Request a full export of your data at any time.
- **We never sell your data** or share it with third parties beyond the service providers named above.
- **Leaving is clean.** Cancel anytime and we'll delete your data on request.
